 KRONES

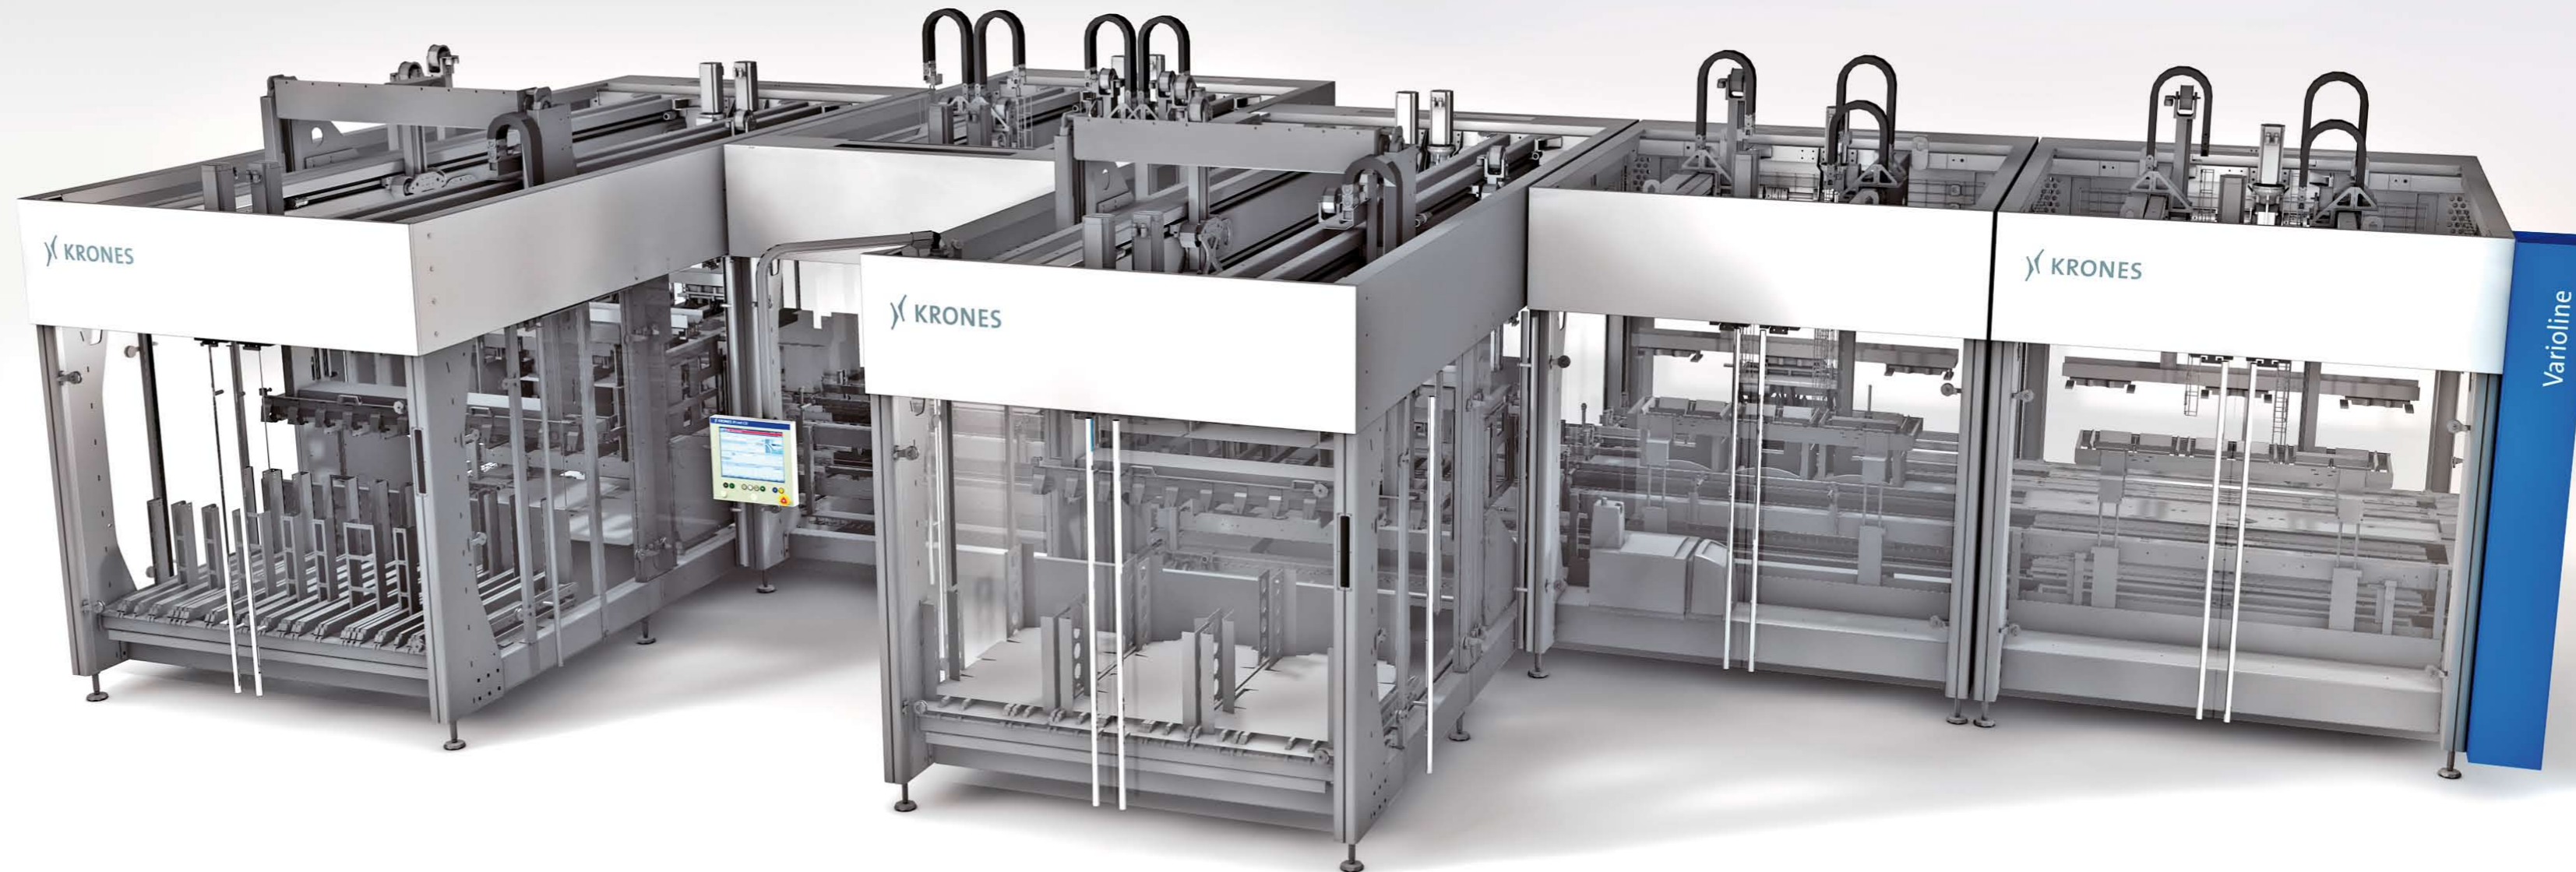

New freedom in packaging

KRONES Varioline

The days when bottles were simply slotted into crates and stacked onto pallets are finally over. Today, the market wants primary and secondary packaging in every way imaginable to consumers. And consumers are of course well-known for their boundless imagination!

But whatever the market comes up with next, the KRONES Varioline will easily keep up when it comes to packaging trends. This versatile system works with primary and secondary levels of packaging – and all in a wide range of variations.

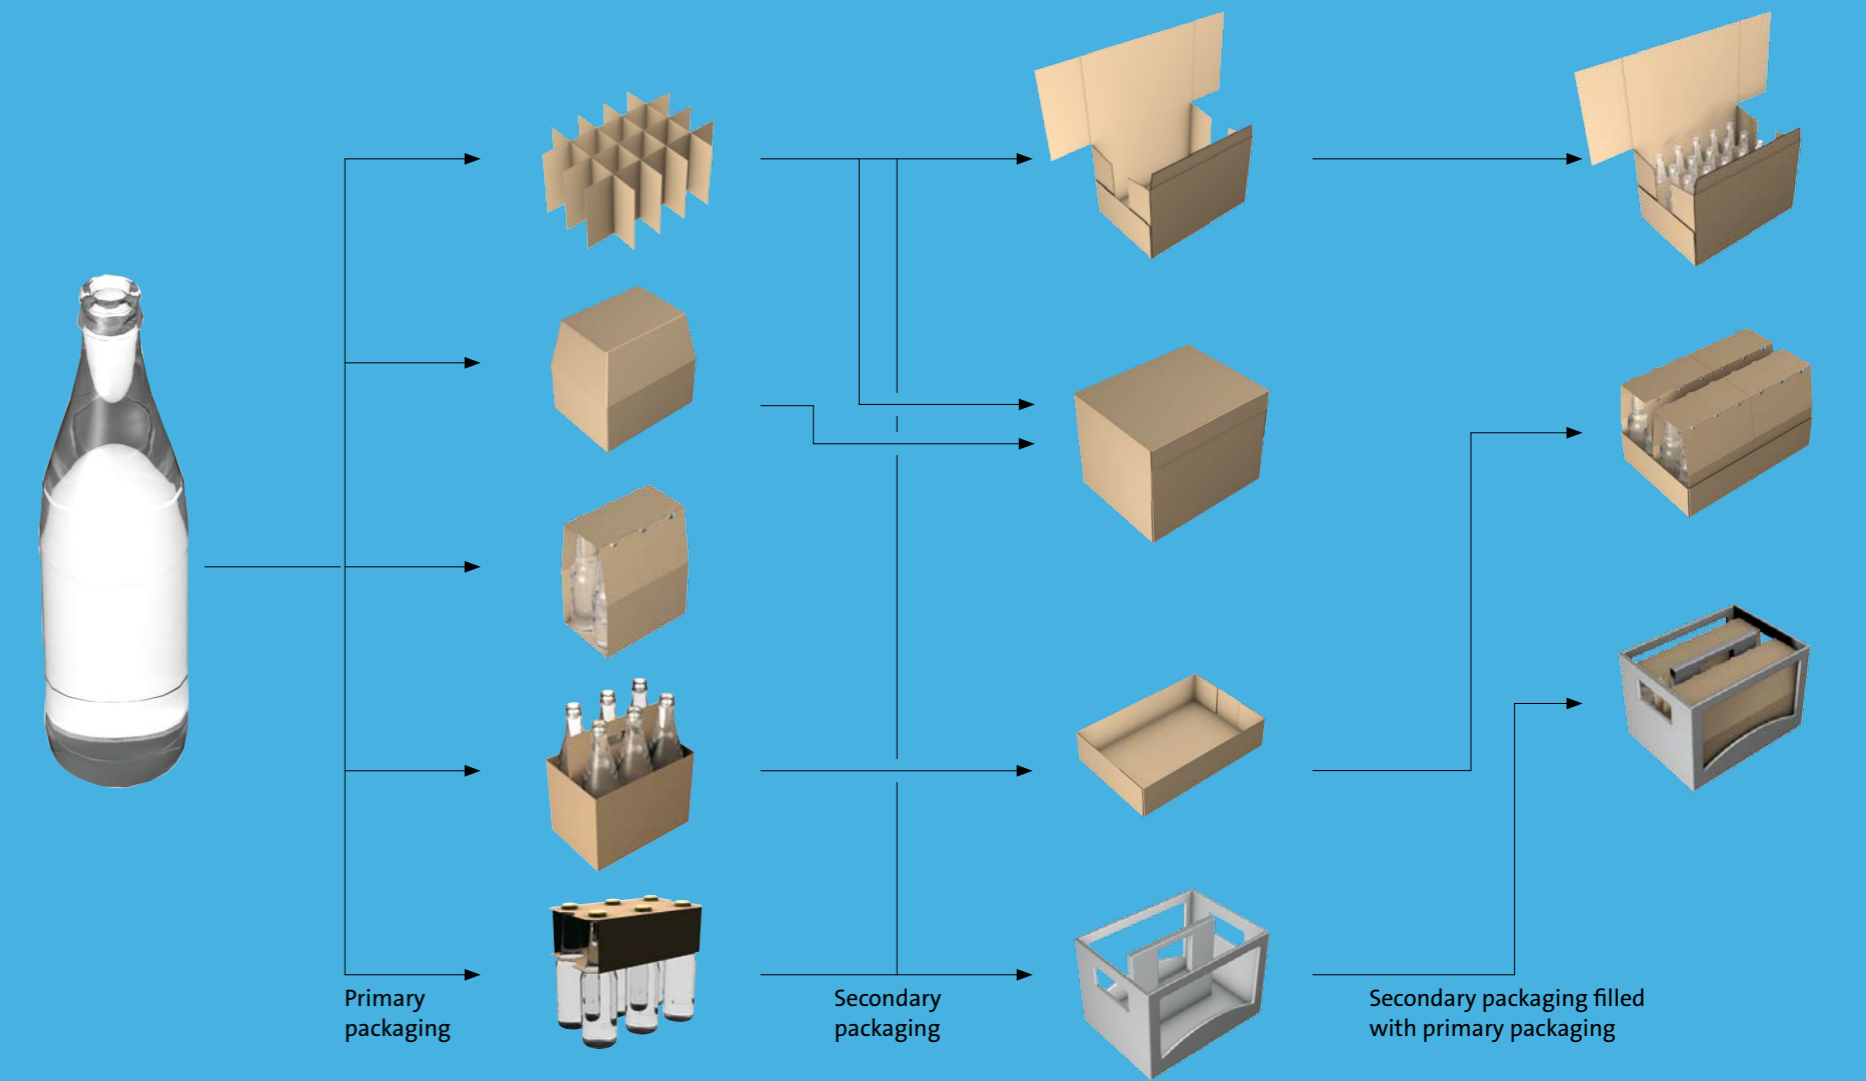

Depending on your individual requirements, it allows you to operate several end-of-the-line packaging runs on one and the same machine. And so that this degree of versatility does not come at the expense of speed, the Varioline is designed to perform at a respectable 40,000 containers per hour.

Every Varioline is individually composed of various modules.

- Choose from:
- a cartoning module which feeds, folds and glues carton blanks
 - a feed module which separates and groups containers and puts them into fibreboard containers
 - a basic module which puts primary packaging into secondary packaging and seals wrap-around cartons

These three modules work together in all combinations as required. All types of packaging can be used and capacity increased by using several of the same modules.

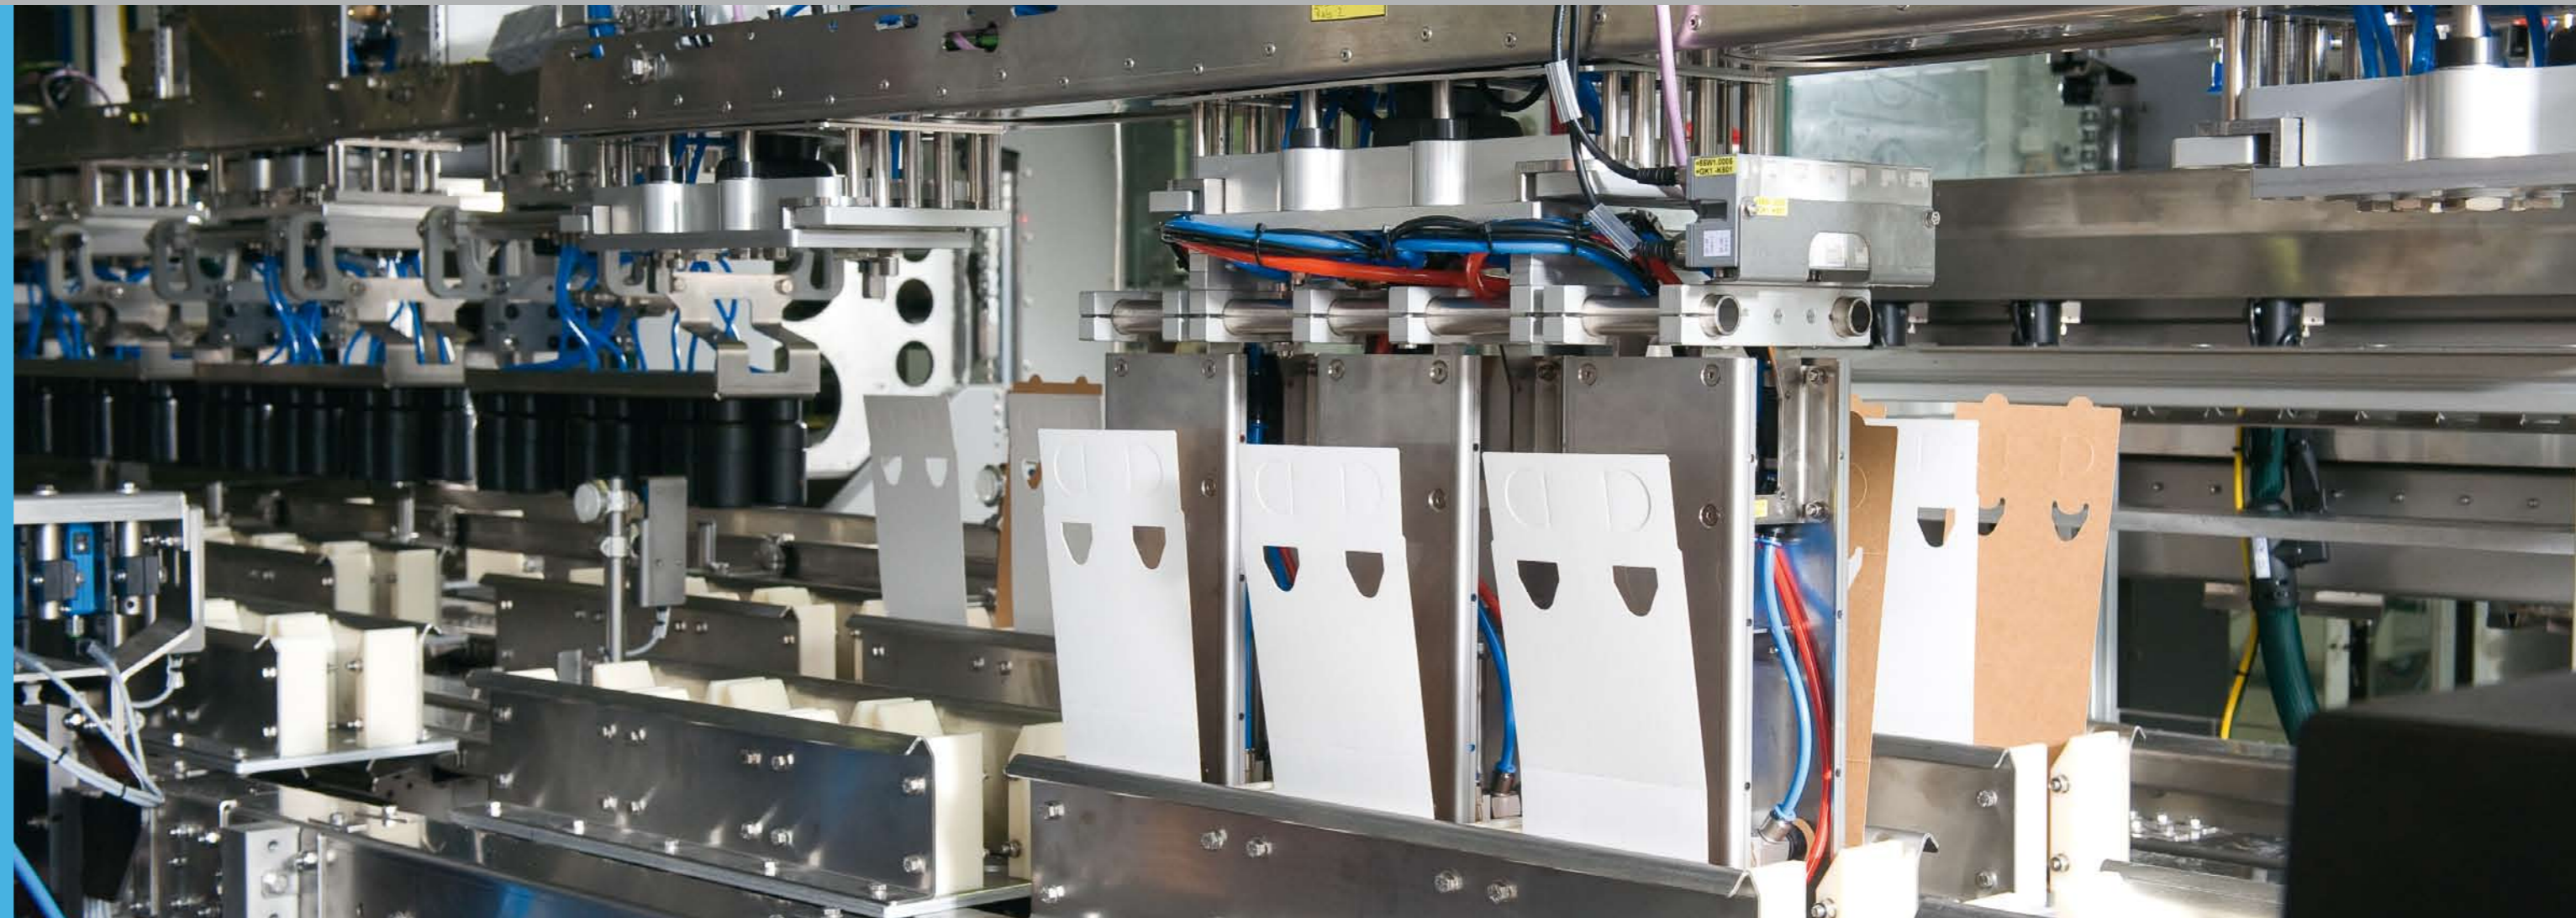

Complex applications, simple operations

KRONES Varioline

Do you think that a plant that covers the complete packaging process will be difficult to operate? Not in the least – in fact, exactly the opposite. The entire line is operated centrally via a 15-inch tilting touchscreen, and with its easy-to-follow menus the Varioline's operations and functions are just as quick to learn as they are to flick through.

With exchangeable format sets, changeovers can be carried out fast and no tools are required. An enclosure of either safety glass or polycarbonate guards the Varioline during operation, thereby increasing your employees' safety. The transparent hinged doors allow all sections of the line to be easily accessed for changeovers and maintenance work.

Your benefits

One for all

The Varioline gives you a completely free hand when it comes to packaging. It allows you to run primary and secondary packaging of all types with one and the same machine.

More space

The compact system takes up to 100 square metres' less space than a conventional packaging line

Reduced costs

Packaging costs fall with Varioline. You are free to choose your carton supplier and thus remain independent of particular suppliers (and prices).
